

## **FINE LINE**

SMALL SMART LIGHT

**The Fine Line is GUDO's smallest turn buckle. Its advantages are quickly explained: small, smart and light.**

### **APPLICATIONS**

This closure is used especially for helmets, where design, weight and comfort are important.

### **COMFORT**

The soft base adapts to every shape of head and, due to its soft structure, usually does not require any additional padding.

### **STRUCTURE AND COMPATIBILITY**

The individually constructed lateral bands, which compose a click system, defy very large tensile forces and are utterly robust.

The soft parts of the sidebands, which touch the head, are made of a very soft and comfortable material. The combination provides robustness and wearing comfort.

## VERSIONS AND CONFIGURATIONS

The Fine Line is available in two different versions of the sidebands and various adjustment wheels, e.g. with and without LED-light. Individual colour combinations can also be realised.

1 THE **SIDE BELTS** ARE AVAILABLE IN **VARIOUS DESIGNS**
