

SWOCKY SMART

SMART AND SOFT

Our SWOCKY SMART impresses with its simple design. Its construction can be individually combined. Its base can be equipped with a simple flat constructed version, as well as with a soft switch.

The closure can be equipped with two different types of sideband. In addition, there are two adjustment wheel versions, with or without LED-light.

APPLICATION AREA

Use this fastener especially in the field of helmets, for example bicycle-, climbing- or also ski helmets.

COMFORT

The soft, springy base adapts to any head shape and, due to its soft construction, usually requires no additional padding. If a more flatten construction is desired, it can be equipped with a simple base plate.

STRUCTURE AND COMPATIBILITY

The side belts are available in different versions, which can be used for your application specific. Different adjustment wheels in colour and design, as well as three different basic variants round off this closure in its variety.

EXECUTIONS AND CONFIGURATIONS

The SWOCKY SMART is available in two different versions of the sidebands and different adjustment wheels, e.g. with LED-light. Individual colour combinations can also be realised.

1 SWOCKY SMART **LINE GSI**

2 SWOCKY SMART **NET**

3 SWOCKY SMART **SOFT**

4 SWOCKY SMART **ADJUSTMENT WHEELS**

5 SWOCKY SMART **BASEPLATES**
