

# SWOCKY NEO

LIGHT AND FLEX

The Swocky NEO system is a further development of the Swock Smart, which is particularly impressive due to its low weight and flexible adjustment options.

## AREA OF APPLICATION

The Swocky NEO fastening system was developed for demanding applications and is used in various areas. It offers reliable support and stability, particularly in helmets for sporting activities such as cycling, climbing and skiing. It is also used for work helmets where safety and low weight are required.

## STRUCTURE AND COMPATIBILITY

A special feature of the Swocky NEO is the logo in the rotary wheel, which always remains in the same position. For an individual design, the components can be designed in different colors and the logo can be customized on request.

## COMFORT

Thanks to the flexible head spider, the fastening system adapts effortlessly to different head shapes. The height adjustment of the headband, in particular the 3-point system, enables precise adjustment for an optimum fit. A special highlight is the special cut-out for wearers with bangs, which offers additional comfort.

## VERSIONS AND CONFIGURATIONS

The Swocky NEO is available in two main versions: the 3-point system and the 4-point system. The 3-point system allows flexible height adjustment of the headrest spider via the ratchet adjustment for an optimum fit. The 4-point system offers additional stability thanks to lateral attachment points that ensure a firm and secure fit.

### SWOCKY NEO 3-Punkt

The 3-point version is clicked into the side of the helmet at two attachment points. A ratchet strap on the head spider, connected to an anchor in the EPS, enables individual height adjustment so that the head spider can be optimally adapted to the shape of the head.

### SWOCKY NEO 4 -Punkt

The 4-point version is clicked into the side of the helmet at four attachment points and thus held in a fixed position. This is an ideal adjustment system for lightweight sports helmets and safety helmets.

## Accessories Parts

- Anchor holder for height adjustment 50mm
- Basket (double) for fastening the side rails
