

SWOCKY

SMART

SMART UND STRONG

Our SWOCKY SMART impresses with its simple design. Its structure can be individually combined. Its base can be equipped with a simple, flat version as well as with a spring-loaded switch.

The fastener can be equipped with two different types of side straps. And also with two rotary wheel variants, with and without LED light.

AREA OF APPLICATION

This fastener is used especially for helmets, i.e. bicycle, climbing or ski helmets.

COMFORT

The soft, resilient base adapts to any head shape and, thanks to its soft structure, usually requires no additional padding.

If a rather flat structure is required, it can be fitted with a corresponding base.

STRUCTURE AND COMPATIBILITY

The side straps are available in different variants, which can be used specifically for your application.

Different rotary wheels in color and design, as well as three different basic different basic variants round off the versatility of this fastener diversity.
